### *Monument Cleaning & Restoration*

---

Cemetery monuments and markers exposed to the elements may show wear and weather, becoming stained or discolored. We offer protection from future wear, cracks, etc. through routine cleaning and restoration.

In cleaning natural stones, such as granite or marble, we use non-toxic biological chemicals that are safe for the stone as well as the environment. In some cases, chemicals may need to rest on the stone for a period of time, drawing impurities and dirt out of the stone.

In restoring bronze markers, the top finish is stripped off the bronze marker, allowing for a new finish to be applied.

Please note that this process may take several days, often requiring the marker to be removed from its site in the cemetery. Pre-1970 bronze markers may not be eligible for restoration based on their original finish.

Additional fees may apply in instances where access to the monument or marker is limited or restricted or in cases where the decay of the marker requires treatment above what is quoted below.

#### Individual flat bronze marker
